

X-Tra-Lift

By Stellar Industries

Hauling items in a truck that are heavy and bulky just got easier. Rinspeed, Inc. and Stellar Industries, Inc. have teamed up to develop the X-Tra-Lift. The X-Tra-Lift makes the traditional pick-up live up to its name. Aesthetically pleasing to the eye, the patented X-Tra-Lift is a very practical and universal lifting device for OEM and aftermarket applications. The lift allows you to transport recreational vehicles, appliances, industrial machinery and equipment, product delivery, rental equipment, and anything else that would fit in the pick-up box.

Pickup Truck Redefined

The X-Tra-Lift is stable throughout its entire cycle. This makes loading and unloading at a loading dock possible when the carrier is placed securely onto the dock itself. The X-Tra-Lift carrier quickly detaches by simply removing two retaining pins from the forward end of the carrier. This allows more than one carrier to be used, or to use the existing pick-up box if so desired.

Maximum Capacity
1320 lbs.

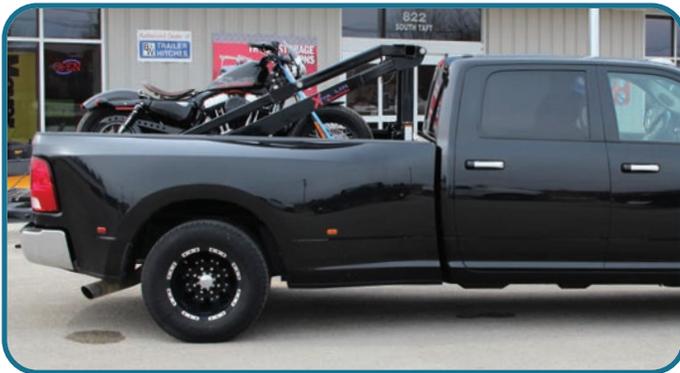

When mounted on a 3/4-ton heavy-duty truck, the hydraulic powered X-Tra-Lift can pick up over 1,300 pounds (600 KG), when evenly distributed across the carrier. The width of the carrier is 48" allowing the transportation of 4' x 8' sheets of plywood or drywall. Currently the X-Tra-Lift is designed to fit most domestic trucks. It fully cycles in approximately 1 minute. The X-Tra-Lift has undergone extensive strain gauge testing to ensure a quality, long lasting operational life. Installation is relatively easy for an aftermarket installer or for an experienced hobbyist.

The carrier of the X-Tra-Lift can be modified to fit your needs by adding a motorcycle wheel chock, extra tie-down rings, or by adding casters to the bottom of the carrier to allow easy movement when detached from the X-Tra-Lift. Optional accessory lights can be added to the top bar for easy viewing during low light.

Operation is done by a tethered remote or by an optional remote control key fob.

If you need a lift that will offer top performance in an industrial or commercial environment, the X-Tra-Lift is for you. Rugged design and a minimum amount of frills ensure a hard working lift.

NOTE: The X-Tra-Lift 1300 body is only capable of 45" width when mounted on any Chevrolet or GMC truck manufactured since the 2007 model year. If customer requires a bed wider than 45", please consult Stellar Industries, Inc.
